

# Condorlube SOL EM

## Synthetic lubricoolant

### Physical-Chemical Properties

Physical State	: Brown liquid
pH at 3%	: 9

### Typical Application

The CONDORLUBE SOL EM is an emulsionable superior quality product, suitable in different concentration, for mechanical working on ferrous and not ferrous materials.

The high preservability of the product assure the performances maintenance for long time

### Characteristics

The solutions of CONDORLUBE SOL EM gives:

- stability for long working time, due to an efficient bactericide and pH control action.
- an efficient anti-corrosive and anti-rust action
- safety conditions for operators, respecting the good operation practices.

### Application conditions

Concentrations	:4 - 5% in water for turning
	:8% in water for hard mechanical processing;
